## SUMMARY

Computer Science undergraduate with strong foundations in Data Structures & Algorithms, software engineering, and backend development. Experienced in building scalable REST APIs, AI-powered applications, and full-stack systems using Java, Python, C#, and JavaScript. Seeking a Software Engineering Internship to build impactful, large-scale software solutions.

## SKILLS

**Backend & .NET:** C#, ASP.NET Core, FastAPI, REST APIs, Entity Framework Core, Dependency Injection, Middleware  
**Data & Analysis:** Python (pandas, data cleaning, basic ETL), SQL, SQLite, MongoDB, REST API integration, JSON data transformation, trend analysis  
**Authentication:** JWT Authentication, RBAC, API Security  
**Frontend:** React, Next.js, TypeScript, Tailwind CSS  
**Tools & Dev Workflow:** Git, GitHub, Chrome DevTools, VS Code

## PROJECTS

**ReviewForge AI – AI-Powered Pull Request Review Platform |** **Mar 2026 – Apr 2026**

- React, TypeScript, FastAPI, Python, Groq LLM, GitHub API, SQLite**
- Developed an AI-powered pull request review platform that analyzes GitHub PR diffs using LLMs backend architecture.
  - Implemented GitHub OAuth authentication, repository integration, and PR fetching workflows
  - Developed FastAPI backend for AI review orchestration, implementing data transformation pipelines to process, clean, and store structured LLM outputs
  - Processed and structured LLM-generated review data into queryable SQLite schemas with severity-based filtering and analytics
  - Integrated Groq Llama models to detect security vulnerabilities, code smells, and performance issues

**Noise Complaint Management System – Production-Ready Backend API |** **Jan 2026 – Feb 2026**

- ASP.NET Core Web API, .NET 10, EF Core, SQLite, JWT, Docker, Render**
- Built a production-ready ASP.NET Core Web API with JWT Authentication and Role-Based Authorization
  - Built complaint trend analysis, status reporting dashboards, and paginated data endpoints — enabling data-driven operational insights for admins
  - Designed layered backend architecture using Repository Pattern, Middleware, Dependency Injection, and Service Layer
  - Implemented complaint lifecycle workflows, filtering, analytics, and pagination using EF Core and SQLite
  - Built secure complaint status workflows with role-based access control for admins and users across protected API endpoints

**UI Time Machine – Interactive Scroll-Based Design Platform |** **Oct 2025 – Nov 2025**

- React, Next.js, TypeScript, Tailwind CSS**
- Developed a scroll-driven UI evolution experience (2010–2030) using React, Next.js App Router, and TypeScript
  - Built modular, reusable components with scroll-triggered transitions using React hooks across desktop and mobile.
  - Optimized rendering performance with Next.js App Router and Tailwind CSS, achieving responsive layouts site-wide
  - Implemented smooth scroll-based animations and timeline transitions to simulate future UI evolution concepts

## ACHIEVEMENTS AND CERTIFICATIONS

- CodeQuesters 2026 — Finalist: Built PinPoint Navigator, a location-based web application under competitive hackathon constraints.
- SRISTI Hackathon - Developed EduSmart MVP, an educational platform prototype focused on accessibility and scalable content delivery.
- Solved 269+ problems on LeetCode (143 Medium, 12 Hard) using Java.
- Participated in 33 LeetCode Weekly/Biweekly Contests.

## EDUCATION

**B.Tech (CSE) — Computer Science and Engineering** **Sep 2023 - present**  
Sreenidhi Institute of Science and Technology (SNIST), Hyderabad | CGPA: 8.45 / 10

**Intermediate — Mathematics, Physics & Chemistry** **2023**  
Narayana Junior College | CGPA: 9.61 / 10

**Relevant Coursework:** DBMS, Data Structures and Algorithms
